

**SECTION A: 60 MARKS**  
**BAHAGIAN A: 60 MARKAH**

**INSTRUCTION:**

This section consists of **FOUR (4)** structured questions. Answer **ALL** questions.

**ARAHAN:**

*Bahagian ini mengandungi EMPAT (4) soalan berstruktur. Jawab SEMUA soalan.*

**QUESTION 1**  
**SOALAN 1**

- CLO1  
C1
- a) List **THREE (3)** embedded systems attached to a smart home system.  
*Senaraikan TIGA (3) sistem terbenam yang terdapat pada sebuah sistem rumah pintar.*
- [3 marks]  
[3 markah]
- CLO1  
C3
- b) A programmer decides to make a home security system using a touch card at pin RB3, a smoke sensor at pin RC5, a temperature sensor at pin RC6 while a magnetic solenoid, buzzer and LED at PORT D. Complete the pins input and output declaration for the program using bit addressable format in C language.  
*Seorang pengaturcara memutuskan untuk membuat sistem keselamatan rumah dengan menggunakan kad sentuh pada pin RB3, penderia asap pada pin RC5, penderia suhu pada pin RC6 manakala solenoid magnet, buzzer dan LED pada PORT D. Lengkapkan pengisytiharan pin masukan dan keluaran dengan menggunakan format pengalamatan bit di dalam bahasa C.*
- [6 marks]  
[6 markah]
- CLO2  
C3
- c) Figure A1(c) shows a block diagram of a washing machine. Implement a C language program to configure the input and output pins using byte addressable format.

Rajah A1(c) menunjukkan rajah blok bagi sebuah mesin basuh. Laksanakan satu aturcara dalam Bahasa C untuk mengkonfigurasi pin masukan dan keluaran menggunakan format pengalamatan bait.

Figure A1(c) / Rajah A1(c)

[6 marks]  
[6 markah]

## QUESTION 2 SOALAN 2

CLO1  
C2

a) Briefly **TWO (2)** functions of timer register in microcontroller.

*Terangkan secara ringkas DUA(2) fungsi pendaftar pemas di dalam pengawal mikro.*

[3 marks]  
[3 markah]

CLO1  
C3

b) Calculate the value that need to be loaded into TMR0H and TMR0L register using 16 bit mode, assuming XTAL = 20 MHz with no prescalar and the desired time delay is 1ms.

*Kira nilai yang diperlukan oleh pendaftar TMR0H dan TMR0L yang menggunakan mod 16 bit. Dengan menggunakan XTAL=20MHz dengan tiada nilai pra skala dan nilai lengah masa ialah 1ms.*

[6 marks]  
[6 markah]

CLO2  
C3

c) Implement a function for void T0Delay( ) in C language to generate a 1ms delay based on Question 2 (b).

*Laksanakan satu fungsi untuk void T0Delay( ) dalam bahasa C bagi menghasilkan masa lengah selama 1ms berpandukan Soalan 2(b).*

[6 marks]  
[6 markah]

**QUESTION 3****SOALAN 3**

- CLO1  
C1
- a) List **THREE (3)** external hardware interrupts in PIC.  
*Senaraikan **TIGA (3)** sampukan perkakasan luaran di dalam PIC .*
- [3 marks]  
[3 markah]
- CLO1  
C2
- b) Explain the negative edge triggered interrupt with appropriate register content to enable and disable the register.  
*Terangkan sampukan picuan pinggir negatif dengan daftar yang sesuai bagi membenarkan dan mematikan pendaftar berkenaan.*
- [5 marks]  
[5 markah]
- CLO1  
C3
- c) Construct a C language program for interface with external hardware interrupt pin RB0/INT0. An LED that is connected to pin RC0 will blink twice every time the INT0 is activated.  
*Binakan satu aturcara dalam bahasa C bagi sampukan perkakasan luar pin RB0/INT0. Satu LED yang disambungkan pada pin RC0 akan berkelip dua kali setiap kali INT0 ditekan.*
- [7 marks]  
[7 markah]

**QUESTION 4****SOALAN 4**

- CLO1  
C2
- a) Explain the function of Pulse Width Modulation (PWM) module in the PIC.  
*Terangkan fungsi modul Pulse Width Modulation (PWM) di dalam PIC.*
- [3 marks]  
[3 markah]
- CLO1  
C3
- b) An 8 bit ADC has reference voltage,  $V_{ref}=2.56V$ . Verify D0-D7 output if the analog input is 1.7V.  
*A DC 8 bit mempunyai voltan rujukan,  $V_{ref}=2.56V$ . Tentukan output D0-D7 jika input analog adalah 1.7V.*
- [6 marks]  
[6 markah]
- CLO2  
C3
- c) As a programmer, you need to design a forward-reverse motor system. When a switch 1 is pressed, the motor will run forward and when a switch 2 is pressed, the motor will run reverse. Use PORT A as input and PORT B as output in PIC16F/18F. Build a suitable program that will fulfil the requirement.  
*Sebagai seorang pengaturcara, kamu dikehendaki mereka bentuk satu sistem motor hadapan-balikan. Apabila suis 1 ditekan, motor akan berpusing hadapan dan apabila suis 2 ditekan, motor akan berpusing balikan. Gunakan PORT A sebagai masukan dan PORT B sebagai keluaran dalam PIC16F/18F. Bina program yang sesuai supaya dapat memenuhi keperluan yang diberikan.*
- [6 marks]  
[6 markah]

**SECTION B : 40 MARKS**  
**BAHAGIAN B : 40 MARKAH**

**INSTRUCTION:**

This section consists of **TWO (2)** essay questions. Answer **ALL** questions.

**ARAHAN:**

*Bahagian ini mengandungi **DUA (2)** soalan esei. Jawab **SEMUA** soalan.*

**QUESTION 1**  
**SOALAN 1**

CLO2  
C3

A switch is connected at pin RB0/INT0 and eight LEDs are connected at PORTC. When the switch is not pressed, the LEDs will turn on one by one with 500ms delay. When the switch is pressed, the microcontroller is interrupted and the ISR is executed. The ISR will toggle all the LEDs twice with 200ms delay. Construct a C language program to perform the operation.

*Satu suis disambungkan pada pin RB0/INT0 dan lapan LED disambungkan pada PORTC. Apabila suis tidak ditekan, LED akan hidup satu per satu dengan lengah masa 500ms. Apabila suis ditekan, mikro pengawal diganggu dan ISR dilaksanakan. ISR akan togel ke semua LED sebanyak dua kali dengan lengah masa 200ms. Bangunkan sebuah aturcara program dalam bahasa C untuk melakukan operasi tersebut.*

[20 marks]  
[20 markah]

**QUESTION 2**  
**SOALAN 2**

CLO2  
C5

In order to increase the production and safety of the workers, a factory uses a semi-automatic busbar drilling system. The busbar is placed in the position of sensor A and B. When both sensors are triggered, the guard will close the work area, the wedge will hold the busbar and the drill will work. Sensor A and B are connected to pins RA0 and RA1 respectively, the wedge at pin RB0, the guard on RB2 and the drill at pin RB6. After 30 second of drilling, the guard will open, the wedge and drill will rise. Design a block diagram and build using C language program using PIC 16F / 18F to implement the system.

*Bagi meningkatkan pengeluaran dan keselamatan pekerja, sebuah kilang menggunakan sistem menggerudi busbar secara separa automatik. Busbar diletakkan pada kedudukan penderia A dan B. Apabila kedua-dua penderia ini dipicu, pelindung akan menutup kawasan kerja, pengapit akan memegang busbar dan gerudi akan berfungsi. Penderia A dan B bersambung pada pin RA0 dan RA1, apit pada RB0, pelindung pada RB2 dan gerudi pada RB6. Selepas menggerudi selama 30 saat, pelindung akan terbuka, pengapit dan gerudi akan naik ke atas. Rekakan satu gambarajah blok dan program dengan menggunakan bahasa C dengan menggunakan PIC 16F/18F bagi melaksanakan sistem tersebut.*
